MUSLIM WHIZKIDZ

Integrated Islamic Science Preschool

LAYING THE FOUNDATION FOR TOMORROW

Our Introduction

Muslim WhizKidz is an integrated Islamic preschool that emphasizes Science, Mathematics & Technology (STEM) in our learning program for children aged 3 – 6 years old. We believe that the prerequisite to be successful in this challenging world is to integrate Islamic values in our daily routine and to master STEM subjects

Our Vision

An established science preschool as center of excellence in science and technology driven by Islamic values.

Our Missions

1. To create home-like atmosphere and inclusive environment where health, safety and children's need is a priority.
2. To provide holistic education that cater to 3 Q's; Intellectual quotient (IQ), Emotional quotient (EQ) and Spiritual Quotient (SQ)
3. To nurture children's ability in science, digital literacy, creative and critical thinking with our comprehensive curriculum and quality teacher-student interactions.
4. Promote good values, habits, attitudes and high ethical standard through principal of Islam.

Our Inspiration

Taking inspiration from top Islamic scientists such as Al-Kindi, Al-Jazari and Al-Khawarizmi, is that they managed to blend faith and science together. As a result, infinite intelligence has been induced. Muslim WhizKidz are also committed to instill four core values that we can learn from our beloved Prophet Muhammad PBUH which are Siddiq (truthfulness), Amanah (trustworthiness), Fatonah (wisdom) and Tabligh (advocacy) before the kids graduate.

Our Approach

As the world is moving towards more sophisticated way of learning and interacting, Muslim WhizKidz have taken the approach to initiate 21st century learning method that will cater to Industrial Revolution 4.0. STEM courses will be introduced to the children from basic to advance level. Fun, exciting and safe experiments will be conducted which would put a smile on their faces. The syllabus is designed in a way to tap into their imagination and curiousness towards science.

Our Technique

Muslim WhizKidz are also stepping up our game by providing tablets/laptops for children to experience learning in a non-conventional way. Digital addiction is an alarming issue especially for Z-Generation. Thus, we will teach the children to control their screen time by using an Islamic concept which is the importance of moderation.

Our Tools

To add icing on the cake, Muslim WhizKidz are also introducing Colored Brain proposed by Arthur Carmazzi which is a tool that incorporates the latest research on neuroplasticity and how neurotransmitter substances & brain communication work. This will allow teachers and parents to understand on how kids process information on daily basis using PROVEN scientific research. Early detection for the effective learning style according to the children's genetic brain processor would be vital for their personal growth and development.
